Applications

TIMELINE

2017

2017, online survey of 220 parents with children aged 6-10, mainly from the U.K. and other western countries - parents are lack of sufficient support for choosing appropriate digital content for their children

2017

2017, face-to-face interviews with 12 families in Oxfordshire and an online survey with 250 parents - Existing privacy safeguarding technologies offer little choices for raising parents' awareness of personal data collection risks or supporting their children's learning

2018

2018, 12 focus group studies with 29 children aged 6-10 from Oxfordshire primary schools - raising children's awareness and understanding of risks related to online recommendations and data tracking

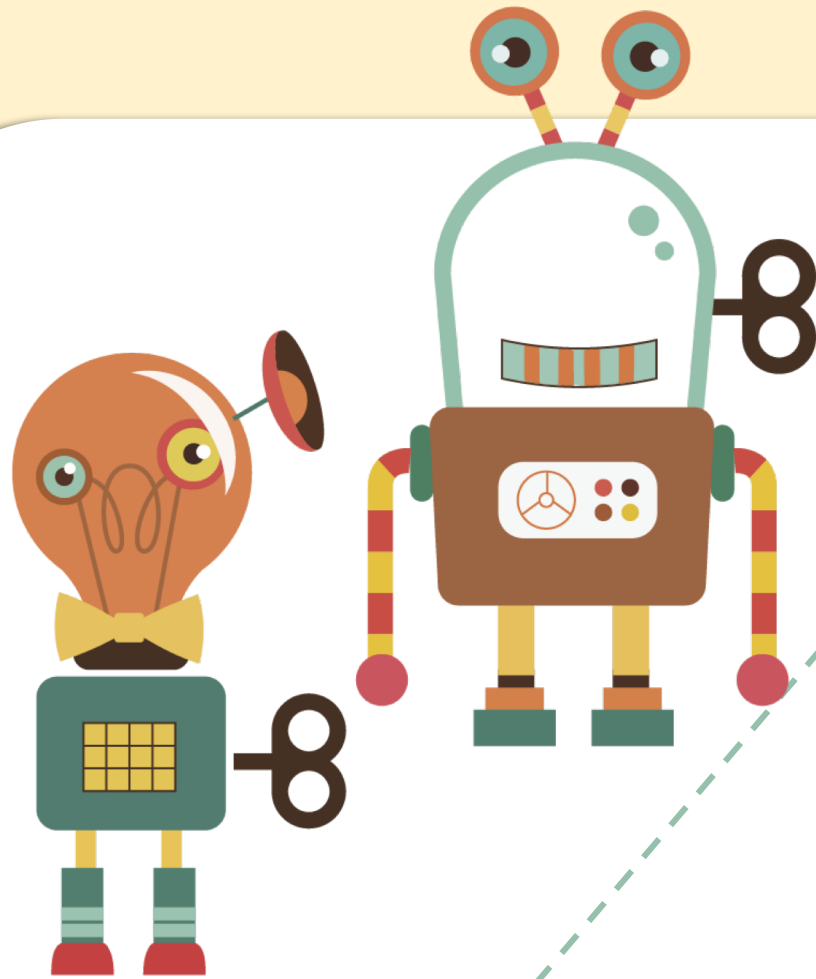

2019

2019, online survey of 593 Chinese parents with children aged 6-10

2019

In the future, responsible design of digital tools for parents and children

What concerns do Chinese parents have about their children' s digital adoption and how to better support them?

BACKGROUND

0 1

Nearly 60% of the overall population of China are now going online

0 3

Mobile platforms are the dominant means for Chinese Internet users to go online, with 98.6% of the online population going online via mobile phones

0 5

The examine of the 1404 most downloaded apps in 2018 found that *92% of Android apps requested ex-cessive core privacy permissions* (Tencent Cohen Lab)

0 2

China is now home to *169 million Internet users under the age of 18*, 89.5% of children under 13s have been reported to have access to the internet

0 4

For those under 18s, *30.3% have had exposure to inappropriate contents and 15.6% had experienced online bullying*

0 6

The goal of our study is to *investigate the digital adoption patterns* by Chinese children, from device usage to online activities, and to discuss *what concerns do Chinese parents have.*

①

Digital devices are widely adopted in Chinese families

Parents' levels of concerns can be influenced by their own digital experiences. Parents with more digital experiences can have a higher level of concerns of their children's privacy online.

②

Parents expressed some level of privacy concerns, but are still content/screen time-oriented

However, parents' level of privacy concern increased when told about potential implications.

③

Children's most used apps are not always appropriate for their age

Online short-video platforms played an important role in Chinese young children's daily life, however, many of these apps are not always appropriate for children's age.

Online learning was reported to be another major reason for children being online. We found that schools and teachers played an important role in children's choices of apps and this is largely different from the UK children.

| App | Number of use | Genre | Age rating | Sensitive personal data access |
|----------------------|---------------|----------------|------------|--------------------------------|
| WeChat (微信) | 205 | Social Network | 17+ | YES |
| TikTok (抖音) | 171 | Social Media | 12+ | YES |
| NamiBox (纳米盒) | 58 | Education | 4+ | YES |
| Iqiyi Video (爱奇艺) | 48 | Video | 17+ | YES |
| QQ | 29 | Social Network | 12+ | YES |
| KnowBox (作业盒子) | 26 | Education | 4+ | YES |
| Baidu (百度) | 16 | Utilities | 17+ | YES |
| Tencent Video (腾讯视频) | 14 | Video | 17+ | YES |
| PUBG Mobile (刺激战场) | 14 | Game | 17+ | YES |
| Youku Video (优酷视频) | 13 | Video | 17+ | YES |

10 Apps that were used most frequently as mentioned in the survey

④

Parents adopted a range of means to safeguard their children online, however mostly through restrictive approaches

This might be related to the *authoritarian parenting style* observed in Chinese parents. Only a small proportion of them (26.6%) regularly discussed privacy issues with their children and very few of them had sufficient awareness of the potential risks (only 10% think there exists noticeable privacy risks in their children's daily online activities). This shows that parents would *benefit from support in tools* and indicates a *need for resources* to help parents safeguard their children online.

SUGGESTIONS

AWARENESS

*Raising the general awareness of online
privacy risks* for both parents and children,
and facilitating these discussions with young
children.

DISCUSSION

Encouraging parents to *discuss online safety issues* with their children, which provides the necessary *scaffolding process* for children's learning. This would require resource development that help parents *improve their digital skills and digital confidence*.

RESOURCE

Tool and resource developments that focus on *facilitating skill and knowledge building* for both parents and their young children that enables parents to learn more about their children's online activities, and encouraging an active *co-learning* experience.
